Honeywell 4 Series gas sensors are the industry standard portable and fixed gas detectors. The range includes sensors which detect oxygen, toxic gases, and fully certified pellistors for combustible gas detection.

DOCUMENT PURPOSE

The purpose of this document is to present the performance specification of the 4NH3LL-100, ammonia sensor.

This document should be used in conjunction with the Product Safety Datasheet (4NH3LL-100) and the Operating Principles (OP08).

The data provided in this document are valid at 20°C, 50 %RH, and 1013 mBar for three months from the date of sensor manufacture.

Output signal can drift below the lower limit over time. For guidance on the safe use of the sensor, please refer to the Operating Principles OP08.

Cross Sensitivity Data

Sensors may exhibit a response to certain gases in a sample other than the target gas. 4NH3LL-100 sensors have been tested with a number of commonly cross-interfering gases and the results are given below. The table shows the typical response to be expected from a sensor when exposed to a given test gas concentration (relevant to safety, e.g. TLV levels).

IMPORTANT NOTE : The cross sensitivity data shown below does not form part of the product specification and is supplied for guidance only. Values quoted are based on tests conducted on a small number of sensors and any batch may show significant variation. For the most accurate measurements, an instrument should be calibrated using the gas under investigation.

TABLE 2. CROSS SENSITIVITY		
Gas	Concentration (ppm)	Output signal (ppm NH ₃ equivalent)
Carbon Monoxide, CO	10	0
Hydrogen Sulfide, H ₂ S	20	< 40
Sulfur Dioxide, SO ₂	5	-1 to -4
Nitrogen Dioxide, NO ₂	5	-1 to -4

- Complete installation, operation, and maintenance information is provided in the instructions supplied with each product.

Failure to comply with these instructions could result in death or serious injury.

SAFETY NOTE

This sensor is designed to be used in safety critical applications. To ensure that the sensor and/or instrument in which it is used, are operating properly, it is a requirement that the function of the device is confirmed by exposure to target gas (bump check) before each use of the sensor and/or instrument. Failure to carry out such tests may jeopardize the safety of people and property.
